# I. Overview

## 1.1 Project background

Rifle Mall currently does not support the function of assigning mall credits to users without their mobile phone number.

## 1.2 Project Objectives

Rafflecopter Mall supports credit/recharge lines for mall employees without mobile phone number scenarios.

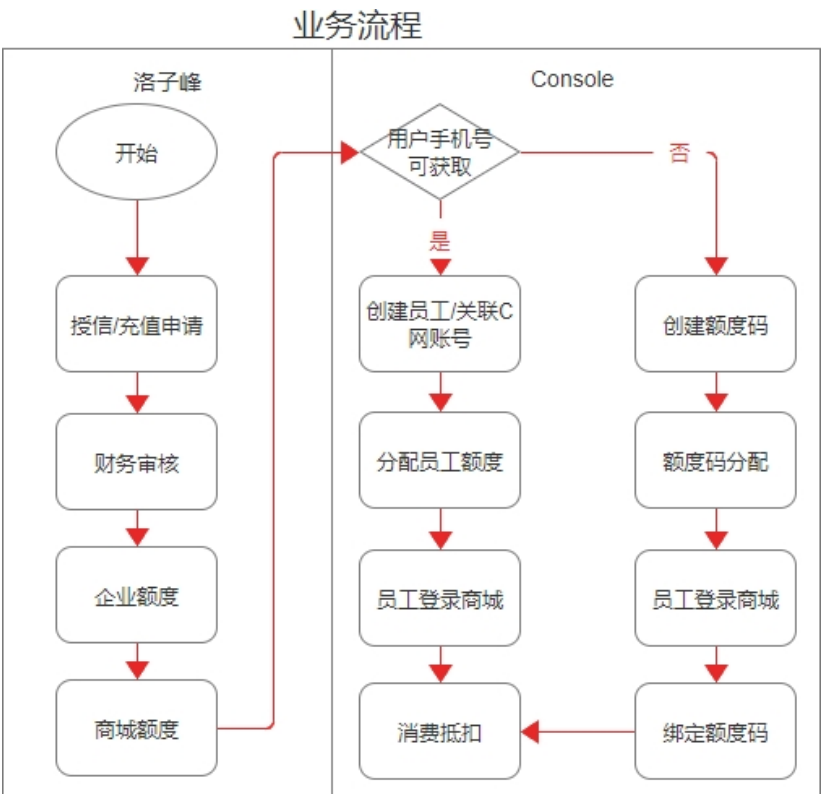

## 1.3 Project risk

omitted

## 1.4 On-line programme

rob

## 1.5 Flowchart / Timing Diagram

After the recharge and credit line is assigned to the mall, the mall can be assigned line growth, at which point the line code can be assigned by the customer on the Console platform, and the employee recharges his or her own line by using the line code method.

Scope of application of the quota code:

Applicable to specific malls of Raffles business, different Raffles mall credit codes cannot be mixed.

Quota Code Rule:

1. Create a quota code:

- 1) Generate quota codes by batch, one by one, and consume the unallocated quota of the corresponding mall and occupy this part of the amount, the status of the generated quota code is "pending binding".
- 2) A single batch of quota codes supports a unique denomination in a range of quantities (10,000 in a single batch is expected, or a minimum of 10,000 is guaranteed).

(2000 certificates)

- 3) Each credit code has a unique card number, but card codes may be duplicated, and when binding a credit code the card

Number and password need to be verified together

4) Each quota code has a batch number, a number, and a password. Batch number: It consists of the letter Q (abbreviation of quota) spliced with a randomly generated 8-digit number, which cannot be repeated. Code number, consisting of the letter M spliced with a 12-digit number (generated sequentially 1, preceded a 0), which cannot be repeated. Password, uppercase letters and numbers Mixed combination, length 6 digits (easy to input) some easily confused characters need to be removed in advance before the combination, among which: letters need to be eliminated O, L, I, D, B, Z, and 0, 8 are eliminated from the numbers.

## 2. Quota Code Binding

1) The "unbound" status of the quota code can be bound to the user, after binding, the status of the quota code will be changed to "bound" and the occupied amount corresponding to this quota code will be converted to the user's quota asset, which belongs to the amount that has been allocated by the mall.

## 3. Quota Code Recovery

1) "Unbound" status quota codes can be reclaimed, after reclaiming, the status of the quota code will be set to "Void", the quota code's occupied amount will be converted to unallocated amount in the mall.

## 4. Employee allocable credit recovery

1) Bound quota codes will be converted to employee quota. Employee quota recycling can be used with the existing functionality. After recycling, the employee quota will be converted to unallocated quota in the mall, at which point the customer can use their mobile phone number to assign or create a new quota code.

This solution is proposed by the product side, the technical side can try to implement it in a better way. Note: The quota code requires cryptic code processing, the image here is only for easy understanding.

field	typology	Required or not	instructions
Mall/Zone	Enterprise Mall  Select  select a control	/	Click to show all [Raffles] malls under this enterprise  See Mall Selector in the [Page Configuration] menu.

#### 2.1.3 Search Area-Interactive/ Function Description

field	typology	instructions
consult (a document etc)	buttons	1, according to the selected conditions filter list  2、 When the condition is empty, according to the time flashback to show all [audited]  state  State of the art rifle mall
Clearance conditions	buttons	Empty current selected conditions

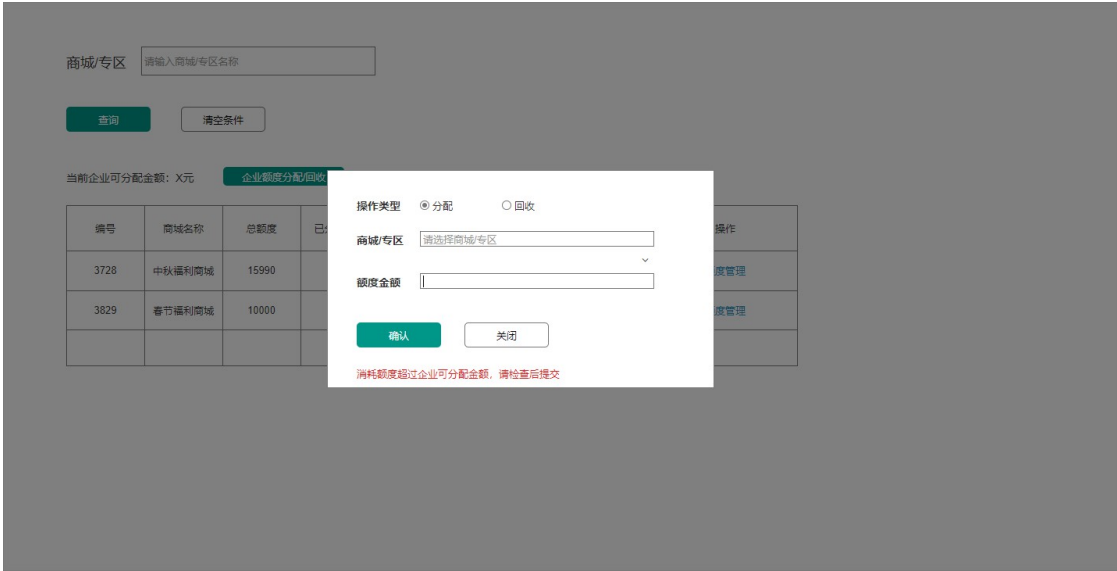

Currently companies can Allocated amount	copies	Show the current unallocated amount of the business \$X
Enterprise quota points Matching/Recycling	buttons	Clicking on it opens the Enterprise Line Management pop-up window

## 2.1.4 List Area - Field Description

field	typology	instructions
Mall No.	String	Current Mall Number
Mall Name	String	Mall name, such as too long can change the line display
Mall expiry date	Time	<p>1、 Display the expiry date of the mall</p> <p>1) Current system time&lt; Mall end time, text is blue</p> <p>2) Current system time&gt; Mall end time, text greyed out</p>
Mall Total	Num	<p>1. The amount of credit allocated to the mall by all businesses (sum of the allocated employee amount, unallocated employee amount, and credit code occupancy amount)</p> <p>2. The maximum amount of the credit limit is 2 decimal places in "yuan".</p> <p>3, a single mall, the amount will only exist a kind of, that is, credit or recharge</p> <p>1) In the case of a top-up, the sum of the Mall's cash pools+ gift pools</p> <p>2) In case of credit, the total amount allocated to the mall for the credit application</p> <p>3) If credits are allocated from the business to the mall, the total mall amount is increased;</p> <p>The total mall amount is reduced when the mall amount is recycled to the business/contract.</p>
Amount allocated	Num	<p>1. The amount of quota that the mall has allocated to the employee</p> <p>2. The maximum amount of the credit limit is 2 decimal places in "yuan".</p>
Unallocated amount	Num	<p>1. The amount of quota that the mall has not yet allocated to employees</p> <p>2. The maximum amount of the credit limit is 2 decimal places in "yuan".</p>
occupancy level	Num	<p>1. The amount of quota that the mall has not yet allocated to employees</p> <p>2. The maximum amount of the credit limit is 2 decimal places in "yuan".</p>
Mall quota management	buttons	After clicking, you will be redirected to the mall credit management page.

## 2.2 Business Line Allocation / Recycling

### 2.2.1 Interface prototype

### 2.2.2 Field Description

field	typology	Required or not	instructions
Type of operation	single election	/	Type of operation, allocation, recovery
Mall/Zone	drop-down selection	/	Show only [Top-up] type malls under the current enterprise Empty prompt: please select the mall, area
credit limit	text box	/	Amount of credits to be allocated/recovered  Only 2 decimal places are supported, no retention beyond that.  Tip when empty: support to retain 2 decimal places

### 2.2.3 Interaction/ Function Description

field	typology	instructions
recognise	buttons	When clicked, judgement is made according to the type of operation  1、 When the operation type is "Allocation" , determine whether the amount of credit exceeds the amount that can be allocated by the enterprise.

		<p>If it exceeds the allotment amount, it will prompt "Consumption exceeds the enterprise's allotment amount by \$X, please check and submit.</p> <p>When the operation type is "Recycle", determine whether the amount of the quota exceeds the amount of the mall, if it does, it prompts "Recycle quota exceeds the unallocated amount of the enterprise by X yuan, please check and submit".</p> <p>2, the maximum number of decimal to retain 2, beyond the prompt "up to 2 decimal places".</p> <p>3. Normal, then the unallocated amount of the enterprise will be deducted and replenished to the unallocated amount of the mall</p>
cancellation	buttons	When clicked, the pop-up window is closed and the content is not saved

### 2.3.2 Base Region - Field Description

field	typology	Required or not	instructions
Mall Name	copies	/	For example, "Chinese New Year Welfare Mall"
Mall expiry date			Example: 2022.10.20 12:20:30-2023.1.23 23:29:28
Allocated	copies	/	1. The amount of quota that the mall has allocated to the employee 2, the amount of up to 2 decimal places, the unit is <del>yuan</del>

unallocated amount	copies	/	1. The amount of quota that the mall has allocated to the employee  2, the amount of up to 2 decimal places, the unit is <del>Yuan</del>
occupancy level	copies	/	1. The amount of money allocated to the unbound quota code by the mall  2, the amount of up to 2 decimal places, the unit is <del>Yuan</del>
draw attention to sth.	Static text	/	Tips. Mobile phone number top-up management: the user provides a mobile phone number and the credit is allocated to the user's mobile phone number. Quota code top-up management: mobile phone number is not available, the quota will be assigned to the quota code (assigned that occupies the quota, if not used, please recycle) the quota code will be assigned to the use of the  Household.

### 2.3.3 Base Area - Functionality / Interaction Description

field	typology	instructions
Employee Management	buttons	after clicking  Jump to the employee management page and bring up the mall information
quota code management	buttons	after clicking  Jump to the management page of the quota code and bring up the mall information.

### 2.3.4 List Area - Field Description

field	instructions
Type of change	Mall allocation, allocation to employees, recovery of employee credits, mall recovery, allocation of credits  Code, quota code recovery
sum of money	The amount of this operation changes, the mall increases to "+" and the mall decreases to "-"  Retain 2 decimal places
operator	Name of operator

operating time	As: 2022-12-08 18:30:29
note	<p>1、Mall allocation of employees For a single entry, display "Mobile phone number: XXXXX" For a batch, display "Quantity: X"</p> <p>2. Mall Recycling Staff For a single entry, display "Mobile phone number: XXXXX" For a batch, display "Quantity: X"</p> <p>3. Enterprise Distribution Mall: no remarks</p> <p>4. Businesses recovered from the mall: no notes</p> <p>5. Quota code allocation: For a single entry, display "Mobile No.: XXXXX" For a batch, display "Batch No.: xxxxxxxx" 6, quota code recovery:  For a single entry, display "Mobile phone number: XXXXX".  For batch, display "Batch No.: xxxxxxxx".</p>

## 2.4 Quota code management (displayed by batch )

The management of quota code is divided into "display by batch number" (default) and "display by code number", which can be switched by clicking.

功能描述

该接口用于获取小程序码，适用于需要的码数量很多的业务场景。通过该接口生成的小程序码，永久有效，数量暂无限制。更多用法详见 获取小程序码。

注意事项

- 如果调用成功，会直接返回图片二进制内容，如果请求失败，会返回 JSON 格式的数据。
- POST 参数需要转成 JSON 字符串，不支持 form 表单提交。
- 调用分钟频率受限（5000次/分钟），如需大量小程序码，建议预生成

获取 scene 值

- scene 字段的值会作为 query 参数传递给小程序/小游戏。用户扫描该码进入小程序/小游戏后，开发者可以获取到二维码中的 scene 值，再进行处理逻辑。
- 调试阶段可以使用开发工具的条件编译自定义参数 scene=xxxx 进行模拟，开发工具模拟时的 scene 的参数值需要进行 encodeURIComponent

小程序

```
Page({
  onLoad (query) {
    // scene 需要使用 decodeURIComponent 才能获取到生成二维码时传入的 scene
    const scene = decodeURIComponent(query.scene)
  }
})
```

### 2.5.2 Search Area- Field Description

field	typology	Required or not	instructions
Mall/Zone	Enterprise Mall  Select  select a control	/	Click to show all [Raffles] malls under this enterprise  See Mall Selector in the [Page Configuration] menu.
mobile telephone number	text box	/	Accurate query of bound quota code based on mobile phone number
code state	drop-down selection	/	Voided, bound, to be bound
code number	text box	/	Precise search for individual quota code number e.g. 4D8R29

### 2.5.3 Search Area - Functions / Interaction Description

field	typology	instructions
consult (a document etc)	buttons	1, according to the selected conditions filter list  2. When the condition is empty, create a time flashback display by amount  code
Removal conditions	buttons	Empty current selected conditions

## 2.5.4 List Area - Field Description

field	typology	instructions
Quota Code Number	String	Unique number of the quota code
batch number	Num	Batch number of the quota code
department store	String	Mall Name
quota	Num	Amount of the quota code, retain up to 2 decimal places
state of affairs	String	Include: unbound, bound, cancelled
mobile telephone number	Num	1. "Bound" the mobile phone number to which the quota code is bound. 2. "Unbound", "Void" status, this is empty.
Creation time	String	Individual quota code creation time, e.g. 2022-11-17 14:20:29
operator	String	Name of person performing the operation
Voiding/binding time	Data	Voiding/binding operation time for a single quota code, e.g. 2022-11-17 14:20:29, time recorded when voiding in the backend, when binding by the frontend user  Record time, empty in [unbound] state.

## 2.5.5 List Area-Functions/ Interaction Description

field	typology	instructions
Voiding and recovering the quota code	buttons	1、 Only in the quota code "unbound" status show, other status (unbound, invalid) hidden 2、 After clicking, this credit code will be set as "Void", and the "CreditCode Occupancy Amount" will be returned to "Mall Unallocated Amount".  Update the voiding/binding time.
